

Date	Risk ID	Manager	Initial Severity	Initial Likelihood	New Severity	New Likelihood	Notes	Explanation for Changes
11/15/2019	R1_Absence	Matthew	L	M	L	H	Jordan absent	Still low severity because only one of us as ever been absent at a time, and there are enough of us to pick up the work. It is now high likelihood because it has happened 4 times in three weeks, so it is highly likely it will continue to happen
11/18/2019	R1_Absence	Matthew	L	M	L	H	Jordan absent	Still low severity because only one of us as ever been absent at a time, and there are enough of us to pick up the work. It is now high likelihood because it has happened 4 times in three weeks, so it is highly likely it will continue to happen
11/18/2019	R7_Skill	Lucy	M	M	L	L	Cassie struggled with using Git	It is now low severity because we have enough people in the group to help explain things, so people struggling here and there won't hugely negatively impact the project. It is now low likelihood because we are now over the hurdle of new concepts and we are well into the swing of implementation.
11/25/2019	R1_Absence	Matthew	L	M	L	H	Jordan absent	Still low severity because only one of us as ever been absent at a time, and there are enough of us to pick up the work. It is now high likelihood because it has happened 4 times in three weeks, so it is highly likely it will continue to happen
11/28/2019	R1_Absence	Matthew	L	M	L	H	Bruno absent	Still low severity because only one of us as ever been absent at a time, and there are enough of us to pick up the work. It is now high likelihood because it has happened 4 times in three weeks, so it is highly likely it will continue to happen
11/28/2019	R8_Instances	Alasdair	L	M	L	M	Encountered some big merge conflicts	Still low severity because we can always just get the latest version from github. It is still medium likelihood because there is always going to be the possibility of merge conflicts when we are working at the same time in a group meeting
11/29/2019	R14_Length	Cassie	M	M	L	M	Realised we probably will not complete implementation before Christmas break like we had hoped	It is now low severity because we will just make more meetings. We now have Christmas break as well which means we have more time free due to not having lectures and classes. It is still medium likelihood because as we start to move on to new tasks, there is always the chance they could take longer than anticipated.
